### DETAILED ACTION

1. Applicant's amendment to the claims, filed on January 30, 2006, is acknowledged.  
Claims 1-14 have been canceled.  
Claims 15-24 have been added and are currently pending.

### *Species Election*

2. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Applicant is required to elect one specific method for treating:

- A) specific disease (e.g. haemolytic disease of the newborn), **AND**
- B) with specific antibody (e.g. anti-HLA-DR as recited in claim 21).

The species do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Applicant has claimed a method of treating diseases such as haemolytic disease of the newborn using antibody that has specific N-glycan structure. The instant specification discloses said antibody is made using host cells such as YB2/0 that can produce said N-glycan structure (e.g. see page 10 of the instant specification).

Beliard et al. (US Patent Application 2003/0175969) teach method of treating hemolytic disease of newborn using anti-RhD antibody that is produced by YB2/0 host cells (e.g. see paragraphs [0001] and [0033]).

Since Applicant's inventions do not contribute a special technical feature when viewed over the prior art they do not have a single general inventive concept and so lack unity of invention.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

3. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
